

REMARKS

Claim 64 is patentable over the applied references, because claim 64 includes features that are not shown or suggested in the references. For example, the references do not suggest implementing a tube fitting for stainless steel tubing with a body having a camming surface angle of at least about thirty-five degrees to about sixty degrees and forming a seal between a hardened ferrule and the camming surface. Claim 64 is in condition for allowance.

Respectfully submitted,

Date: 12/20/05
